## PRIORITY ITEMS - EMBEDDED INDUSTRIAL CONSUMERS

### 2012 IESO BUSINESS PLAN

#### **Global Adjustment**

Acknowledge actions taken and the IESO's Regional Sessions. IESO to continue to support the Province's Global Adjustment Initiative /Regulation with the large users.

The next step for SAC and the IESO is to support the extension to other users (lower threshold) as well as to make the Aggregation option more realizable. (In the meantime, the IESO is to continue to work with customers who want to aggregate now).

#### **Price Signals**

The SAC and the IESO jointly support increasing the role of competitive markets and price signals including real costs of generation/supply and transmission. Determine the role of exports.

Users are insecure of the long term electricity cost impact, want consistency in order to plan.

#### **Province's Long Term Energy Plan**

The SAC and IESO to be a clearing house for information and assist constituents to understand. Capitalize on the IESO's credibility and respect in the Industry.

Users have continued confusion over the mandate and the value of Ontario's energy related agencies. The IESO to provide ongoing updates of its role and value throughout the Industry.

#### **Buy Ontario**

The SAC and the IESO to continue supporting Ontario manufacturers/businesses to benefit from supply chain and energy efficiency opportunities arising from Industry Initiatives.

IESO to support capital investments for energy related infrastructure that will be required.
